

Alumas – versatile profile design for desktop and wall applications.

Clear, sophisticated lines characterize this enclosure, which is made of extruded press profiles. It is available in three depths (120 mm, 180 mm and 240 mm), and the use of aluminium provides good EMC protection. The profile construction ensures that the height and width of the enclosure can be adapted to meet individual needs. Alumas – an effective, high-quality enclosure for electronic equipment in every sector of industry.

The well designed profile permits the insertion of slot-in front panels. Screw-on part front panels are available on request. Various constructions can be mounted by means of the grooves which are integrated into the profile and into which the tapped strips are inserted. Wall brackets, wall angle brackets and a handle are available as accessories. Set-up feet supplied in four colours which, in combination with the colouring of the enclosure, create an individual design quickly and at low cost, round off the accessory programme.

Enclosure material: Aluminium extrusion, Al Mg Si 0.5. For technical data see pages 652-655.

Surface: Phosphatized, powder-coated, with fine surface structure.

Colour: Light grey, similar to RAL 7035; special colours on request.

Ingress protection: IP 40/DIN EN 60529

Accessories (additional charge):
